

HUGE AND VIGOROUS

Jumbo Ladino clover grows faster and is more vigorous than many other white clovers. Jumbo is characterized by its large leaf size - up to three inches wide in optimum growing conditions.

Jumbo can significantly improve pastures when seeded at the recommended ratio of up to 30% with grasses. (Forage experts recommend that white clover would not exceed 30% of a forage mix to prevent the possibility of bloat).

Jumbo Ladino clover can be used in new seedlings or to overseed existing pastures. It should be planted with proper inoculants at a rate of 2-4 lbs. per acre. Jumbo is a very cost effective way to improve your pastures.

Notable Characteristics:

- Large Leafed
- Aggressive
- Nutritious
- High yielding
- Huge & Vigorous

Performance Data:

Dry Matter Yield Test - Poplarville, MI

Variety	lbs/acre
Jumbo	1869
Will	1734
Shasta	1681
Regal	1564
Osceola	1477
Prestige	1080
GA-21158	950

Twelve white clovers were tested. Jumbo yielded over 26% more dry matter than the average.
